Summary

Platform engineer with 5+ years designing and securing cloud infrastructure and CI/CD across AWS, GCP and Azure, now running a multi-account AWS platform for FinTech teams at Worldline. Researcher on Intelligent Internal Developer Platforms (IIDP), with a full paper accepted at CENTERIS 2026. Hackathon winner (Epiminds × Google, Ericsson AI + Low-Code) who builds multi-agent systems, and an active community builder as Head of IT at Stockholm AI and n8n Ambassador.

Experience

Senior Platform / DevOps Engineer, Worldline (formerly Bambora) Jul 2025 to present, Stockholm

- Engineer and run a scalable, secure multi-account AWS platform that FinTech teams use to build and deploy payment services.
- Drive infrastructure as code with Terraform and OpenTofu across VPCs, IAM and security groups, reducing technical debt and improving security; designing a self-service GitOps deployment model.
- Centralised logging and monitoring with CloudWatch and the ELK stack, strengthening alerting and incident response for mission-critical payment services.
- AI Catalyst in the internal AI programme: teach LibreChat training sessions and the Agents 101 session of the Elevate Learnings AI programme.

Cloud DevOps Engineer, Alvonant Limited Feb 2024 to Jun 2025, Remote

- Led enterprise cloud migrations for 5 clients, reducing infrastructure costs by an average of 42% across GCP, AWS and Azure.
- Engineered HIPAA-compliant GCP infrastructure for a healthcare enterprise using GKE, BigQuery and strict IAM policies.
- Designed a real-time outage data platform for a telecom operator, letting NOC analysts detect tower outages within seconds.
- Built a serverless, CRM-integrated microservices platform on AWS for West Africa's largest beach resort (bookings, payments, procurement).
- Cut deployment time by 50% (99.98% success rate) with Jenkins, Azure DevOps and GitHub Actions; reduced MTTD and MTTR by 40% with Prometheus and Grafana; standardised Terraform across 12+ production environments.

Cloud and Backend Engineer, EntaMarket May 2022 to Jan 2024, Lagos

- Designed and deployed a cloud-native e-commerce platform on AWS serving 150,000+ users at 99.99% uptime.
- Led the re-architecture of monolithic services into microservices on Kubernetes and serverless; cut incident response times by 60% with CloudWatch and ELK.

Software Engineer, Nexbuy District Limited Jan 2018 to Apr 2022, Remote

- Built backend services in Python and Go on Google Cloud with automated CI/CD, testing and security checks; authored 3 internal whitepapers on cloud-native practice.

Wins and recognition

- **Winner**, Epiminds × Google Hackathon, Stockholm (2026): SWARM RELIEF, a stigmergic multi-agent system for humanitarian incident response.
- **1st place**, Ericsson AI + Low-Code Hackathon (2025).
- **3rd place**, Embedded Finance Build Day, Stockholm (2026): agent-negotiated B2B settlement network with signed audit trails and MCP.
- **Finalist**, Saab Smart Air Base Hackathon (2026): MACS, a multi-agent command system for air base operations.
- **Earlier:** Finalist, SPE Africa Student Paper Contest (2022); Winner, ISDC Green Technologies competition (2022); 1st runner-up, SPE Nigeria STSE Energy Challenge (2022); 2nd runner-up, SPE Nigeria STSE (2021) and IMMME (2018) paper contests.

Research, papers and talks

- *Intelligent Internal Developer Platforms: An AI-Native Approach to Strategic Software Delivery and Governance*. Full paper, CENTERIS 2026 (accepted; presenting November 2026). Builds on my MSc thesis at Stockholm University.
- **Talks:** "Beyond copilot: what an intelligent internal developer platform actually looks like", TechForum Nordic; Agents 101, Worldline Elevate AI programme; n8n automation workshop for ~50 participants, Pink Programming; Royal Academy of Engineering conference, sole student paper presenter (2021).

Selected projects

- **rootOps (IIDP reference implementation):** semantic memory over code and telemetry, OTLP ingestion, log-to-code correlation, PR risk scoring and an auto-heal pipeline that opens PRs for human review.
- **Breadth:** node canvas that maps codebases and distributed systems. **CORE:** conversational bookkeeping for Nigerian SMEs, in beta. **On Behalf:** agent negotiation protocol (Nebius × NVIDIA hackathon).

Community and leadership

- Head of IT and Board Member, Stockholm AI: community infrastructure, weekly newsletter, organiser of the AI for Meta-Science Hackathon and Hack4good (with n8n).
- n8n Ambassador and organiser of n8n Node Nights Stockholm; Senior DevOps Mentor at Emerj (400+ junior developers); beVisioneers Fellow 2026; Nigeria lead, Tree++ Global10.

Education

MSc, Strategic Information Systems Management (120 hp), Stockholm University (DSV) 2026

BEng, Metallurgical and Materials Engineering, University of Nigeria, Nsukka 2021

Certifications and skills

Certifications: KCNA (CNCF, 2025); Azure Developer Associate (2025); AWS Certified Developer, Associate (2025); AWS Certified Solutions Architect, Associate (2022); AWS Cloud Practitioner (2020).

Skills: AWS, GCP, Azure; Terraform, OpenTofu, Ansible; Kubernetes, Docker, Helm, ArgoCD; GitHub Actions, Jenkins, Azure DevOps; Prometheus, Grafana, ELK, CloudWatch, OpenTelemetry; Python, Go, Bash; multi-agent systems, RAG, MCP, n8n.

Languages: English (native); Swedish (learning).
